1. Introduction

This document outlines the functional and design specifications for two interactive Tableau dashboards supporting data-driven decision-making across sales and marketing teams.

Scope of Work

- ▶ **Sales Performance Dashboard** — Year-over-year KPIs, monthly and weekly trend analysis, and product subcategory comparisons.
- ▶ **Customer Analytics Dashboard** — Customer KPIs, behavioural trends, order distribution, and top-customer profitability ranking.

Stakeholder Groups

Stakeholder	Primary Interest
Sales Managers	Operational metrics; weekly trend monitoring
Executives	Year-over-year performance; profitability overview
Marketing Teams	Customer segmentation; engagement and loyalty signals
Management	Strategic KPIs; top-customer intelligence

2. Sales Performance Dashboard

2.1 Dashboard Purpose

The **Sales Performance Dashboard** presents a consolidated overview of core sales metrics and trends, enabling stakeholders to conduct year-over-year analysis and identify patterns that drive strategic decisions.

2.2 Key Requirements

KPI Overview

Display a summary tile for each indicator, showing Current Year (CY) and Previous Year (PY) values alongside a delta indicator:

Total Sales	Total Profit	Total Quantity
Revenue in the selected period	Net profit after costs	Units sold

Sales Trends

- ▶ Render a **monthly line or area chart** for each KPI (Sales, Profit, Quantity), displaying current-year and previous-year series simultaneously.
- ▶ Visually highlight months with the **highest** and **lowest** values using distinct markers or callout annotations.

Product Subcategory Comparison

- ▶ Present a **side-by-side bar chart** showing sales performance per product subcategory, comparing CY versus PY.
- ▶ Pair each subcategory bar with the corresponding **profit value** to enable a comparison between revenue and profitability.

Weekly Trends for Sales and Profit

- ▶ Display **weekly granularity** data for both sales and profit for the current year.
- ▶ Overlay a reference line representing the **average weekly value** for each metric.
- ▶ Apply conditional colouring to **highlight weeks above and below average**, drawing attention to performance outliers.

Design Guidance: Use a diverging colour palette (e.g. green/red) to distinguish above-average from below-average weeks. Ensure accessibility for colour-vision-deficient users via shape or pattern redundancy in addition to colour coding.

3. Customer Analytics Dashboard

3.1 Dashboard Purpose

The **Customer Analytics Dashboard** provides a comprehensive view of customer data, trends, and behavioural patterns, enabling marketing and management teams to understand customer segments, measure engagement, and improve satisfaction strategies.

3.2 Key Requirements

KPI Overview

Display summary tiles comparing CY against PY for the following metrics:

Total Customers	Sales per Customer	Total Orders
Unique customer count	Avg. revenue per customer	Total orders placed

Customer Trends

- ▶ Present each KPI as a **monthly time-series chart** for both the current and previous year.
- ▶ Apply visual highlights to identify months with **peak and trough** values across all three KPIs.

Customer Distribution by Number of Orders

- ▶ Render a **histogram** grouping customers by order frequency (e.g. 1 order, 2–3 orders, 4–6 orders, 7+ orders).
- ▶ This view surfaces customer loyalty segments and supports targeted retention and upsell campaigns.

Top 10 Customers by Profit

Present a ranked table of the ten most profitable customers, including the following columns:

Rank	Customer Name	Orders	Sales (CY)	Profit (CY)	Last Order
1	—	—	—	—	—
2	—	—	—	—	—
3	—	—	—	—	—
... continued to rank 10					

CY = Current Year

4. Design and Interactivity Requirements

4.1 Dashboard Dynamics

- ▶ **Year Selection:** Provide a year parameter control allowing users to select any historical year; all KPI tiles, charts, and tables must respond dynamically.
- ▶ **Cross-Dashboard Navigation:** Include persistent navigation elements (e.g. tab-style buttons) so users can switch between the Sales and Customer dashboards without leaving the view.
- ▶ **Interactive Filtering via Charts:** All charts and graphs must act as interactive filters — clicking a data point, bar, or segment filters the remaining visualisations on the dashboard.

4.2 Data Filters

Expose the following global filter controls, accessible from both dashboards:

Filter Group		Options	Cascade Behaviour
Product Filters		Category, Sub-Category	Sub-Category list narrows when a Category is selected
Location	Filters	Region, State, City	State narrows from Region; City narrows from State

4.3 Accessibility and UX Guidelines

- ▶ Maintain sufficient colour contrast (WCAG AA minimum) for all text and chart elements.
- ▶ Use tooltips on all chart marks to display metric values and contextual labels.
- ▶ Optimise layouts for desktop and large-screen environments (1440px minimum width).
- ▶ Apply consistent typography, spacing, and colour tokens across both dashboards to establish a cohesive visual identity.

5. Requirements Summary Checklist

#	Requirement	Dashboard
1	KPI tiles: Total Sales, Profit, Quantity (CY vs PY)	Sales
2	Monthly KPI trend charts with high/low month highlights	Sales
3	Product subcategory bar chart with profit overlay	Sales
4	Weekly sales and profit chart with average reference lines	Sales
5	Above/below-average week conditional highlighting	Sales
6	KPI tiles: Customers, Sales per Customer, Orders (CY vs PY)	Customer
7	Monthly KPI trend charts with high/low month highlights	Customer
8	Customer distribution histogram by order frequency	Customer
9	Top 10 customers table (rank, orders, sales, profit, date)	Customer
10	Year selection parameter control	Both
11	Cross-dashboard navigation controls	Both
12	Chart-driven interactive cross-filtering	Both
13	Product filters: Category, Sub-Category	Both
14	Location filters: Region, State, City	Both
15	Cascading filter logic	Both
16	WCAG AA colour contrast compliance	Both
